THE INDUSTRY LEADER IN VULCANIZED RUBBER TECHNOLOGY

WITH BOTH VULCANIZED
RECYCLED RUBBER
AND VIRGIN RUBBER
SOLUTIONS

North West Rubber specializes in vulcanization, the process of cross-linking polymers together under high heat and pressure. The result is an almost indestructible bond that leads to a more durable rubber product, highly resistant to wear and tear, and moisture penetration.

	 Vulcanized Rubber	 Polyurethane Bound Rubber
 DURABILITY	Superior tensile strength, elasticity.	Continuous use deteriorates product.
 NON-POROUS	Does not absorb any liquids, up to 20 times less absorbent than polyurethane bound rubber.	Liquids absorb into pores between rubber particles.
 FINISH/ SEALERS	Not required, naturally anti-bacterial.	Required to close pores from absorbing liquids.
 MAINTENANCE	Smooth top surface makes cleaning easy.	Rougher, porous surface is more difficult to sanitize.
 CLEANLINESS	Does not harbor bacteria.	Porous surface allows bacteria to penetrate and create odors.

VULCANIZED RECYCLED RUBBER FLOORING

STAMINA
High Performance, Low Maintenance

Manufactured from 100% recycled rubber, this non-porous, vulcanized rubber floor's durability is second to none. Engineered to withstand heavy abuse while repelling liquids associated with bacteria and odour build-up, Stamina is a longer lasting floor ideal for use in fitness facilities and ice arenas.

VULCANIZED VIRGIN RUBBER FLOORING SYSTEM

REACTION

Classic Athletic Speckle Design Aesthetic

Engineered to support athletic weightlifting and high-intensity training, ReAction features a shock-absorbing, dual-layer system with a high grip, non-porous resilient and hygienic surface wear layer. This system provides best in class resistance against cuts and dents, dissipates shock and stress associated with heavy drops, and provides optimal energy return to the athlete.
